We at Cobra Heavy Iron realized that the lack of the 360 degrees walk around compliance within our company, has not only cost our company thousands of dollars as well as lost down time with equipment repairs. We felt that although our company has a 360 walk around program in place, we were unable to say that we are 100% compliant. Our company knows and understands the mechanics of the safety pyramid (Heinrich's Triangle), it was only a matter of time before one or more of our employees would be injured due to the lack of compliance with the 360 degrees walk around.

We received an invitation from National Safety Solutions to participate in the testing and operation of their Start Right Safety Device. We have had the pleasure of working with National Safety Solutions over the last 12 months in the testing and operation of the Start Right Safety Device.

In the beginning our employees showed resistance as it was a change to our already existing safety program which was not always being followed. After a short period of time the resistance became less as the safety culture began to improve in our 360 degrees walk around program. Within 30 days all our employees, management, have been 100% compliant. We have also been able to eliminate incidents between vehicles/equipment and stationary items. With that success, it shows our employees and clients that we are truly working everyday to make their workplace safer. We would like to thank National Safety Solutions for helping us continue to grow and develop our safety culture.

Cobra Heavy Iron wishes to congratulate National Safety Solutions in their quest to continually build a higher level of safety cultures that ensures everyone is safe in their workplace.
