MX3 is a company that mostly does field work and with a fleet of vehicles and tool trailers we were starting to see an increase of small issues arising from not having a walk around plan. From things like an employee running over something and destroying a tire on a truck to others backing into our equipment.

Since implementing the Start Right Safety Device we have noticed a significant decrease in human error accidents. This device has made us more aware of not only our own surroundings but others as well. Keeping our employees and everyone around us safer. This is a great product that has worked very well for us.

Thanks National Safety Solutions!
